VERSA·VISE

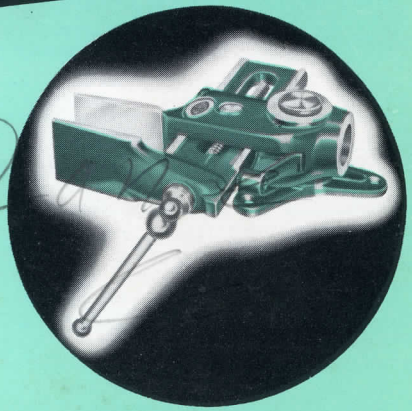
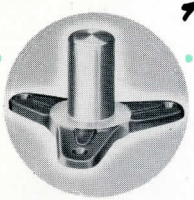
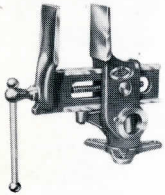
THE *Versatile* VISE

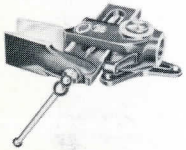


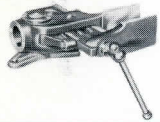
For *Every* woodworking need

Here's how VERSA·VISE *works...*







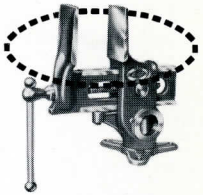


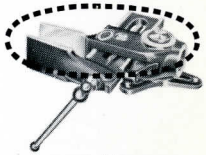
1 The VERSA-VISE base, which is fastened to your workbench, forms a pivot around which the VERSA-VISE can be turned to any desired position. When it's not in use, the VERSA-VISE can be removed from the base and kept in your tool chest if you wish. Extra bases are available if you want to use the vise in more than one location.

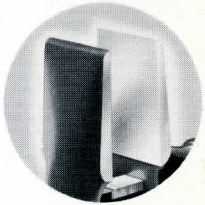
2 The VERSA-VISE is designed in such a way that it can be placed on the base in the vertical position or the horizontal position for right or left-hand use. It can be changed very easily from one position (vertical or horizontal) to another. You just pick it up from its base and put it back down in the position which is best for the next job. Carefully machined bearing surfaces assure easy operation.

3 Once the VERSA-VISE has been placed on its base, you simply turn it to the most convenient position for the work to be done. The vise rotates freely on the base until its jaws are tightened upon the object to be held. The locking mechanism then presses automatically against the base, locking the VERSA-VISE securely in position. There's no separate clamp to tighten – one operating handle does it all. VERSA-VISE works equally well with thick or thin material, with a positive grip and a positive lock in position from its widest capacity of five inches down to the thickness of paper.

4 The holding surfaces of the VERSA-VISE jaws are 2½ inches wide, 3½ inches deep, made of cast semi-steel and finely machined to provide large flat areas which hold an object tightly without marring it.







VERSA-VISE is ideal for your woodworking needs

In reading the explanation of the way the VERSA-VISE works, you probably have thought of many ways it could fit your particular requirements. But there's one important point to remember – you can't possibly imagine all of the many ways the VERSA-VISE can make your work easier and more efficient without actually working with it in your own shop. You'll find a new use for the VERSA-VISE practically every time you use it.

Whether you are a carpenter, a cabinetmaker, or just a "handy man around the house" -- whether you work with wood for pleasure or for profit – you'll have a real helper when you buy a VERSA-VISE. With its ability to work in a vertical or horizontal position, and to be turned easily to any convenient direction, you'll wonder how you ever got along without it.
